

Artifact 9 — Ethics & Trust Mapping

Risk & Ethics Gating · Stage 4

DOCUMENT DETAILS

Project	Home-Care-AI	Stage	Discovery → Stage 4 (Risk & Ethics Gating)
Date	2026-03-26	Regulatory	Australian Privacy Act 1988 (APP). HIPAA-grade security applied as design floor.
Methodology	Green / Yellow / Red data classification; Creepiness vs. Care test; Compound Combination flags		
Input	Artifact 7 (E-1 through E-6) + Artifact 8 (Q1/Q2 Critical ethics assumptions) + CLAUDE.md Article VII Trust Zone Framework		
Feeds into	Artifact 10 — Agentic Safety Discovery (Skill 10)		

Table of Contents

Table of Contents	2
1. Trust Zone Definitions (CLAUDE.md Article VII)	3
2. Data Inventory — All Data Types in the Product	3
2A — Coordinator Data	3
2B — Staff (Carer) Data	3
2C — Client Data (Soft Preference Profile — SPP)	4
2D — Family / Family Contact Data	5
2E — AI / System-Generated Data	5
3. Creepiness vs. Care Test	6
Yellow Data — Creepiness vs. Care Assessment	6
Red Data — Mandatory Review	7
4. Compound Combination Flags	7
5. Notification Routing Rules (E-3 Enforcement)	8
6. Data Collection Rules by Zone	9
■ Green — Collect by Default	9
■ Yellow — Explicit Opt-In Required	9
■ Red — Emergency-Only or Requires Full Legal Process	10
7. Ethics Gate — Feature Clearance Status	10
8. DPIA Trigger Register	11
9. V1 Data Model — Cleared Fields Only	12

11. Action Items	13

1. Trust Zone Definitions (CLAUDE.md Article VII)

1. Trust Zone Definitions (CLAUDE.md Article VII)

Zone	Data Type	Collection Rule	APP Obligation
■ Green	Non-intrusive operational data	Collect by default; standard privacy notice sufficient	APP 1 (open and transparent); APP 5 (notice at collection)
■ Yellow	Sensitive: location patterns, medication schedules, activity baselines, soft preferences	Explicit opt-in required; DPIA recommended	APP 3 (sensitive information — explicit consent); APP 5 + APP 6
■ Red	Invasive: voice tone analysis, cognitive inference, compound health signals, indirect health inference	Emergency-only trigger; DPIA mandatory; explicit informed consent; legal review before implementation	APP 3 (sensitive); DPIA under APP 1; legal review required

2. Data Inventory — All Data Types in the Product

2. Data Inventory — All Data Types in the Product

Sourced from Artifact 5 (OST solutions S1–S11), Artifact 6 (PM-1 through ENG-5), and Artifact 7 (ethics assumptions E-1 through E-6).

2A — Coordinator Data

2A — Coordinator Data

#	Data Type	Description	Zone	Rationale
C-1	Coordinator identity	Name, agency, role, contact details	■ Green	Standard employment/operational data; not sensitive under APP
C-2	Coordinator device + session data	Login timestamps, session duration, notification open rates	■ Green	Operational product analytics; non-intrusive
C-3	Coordinator approval decisions	Which replacement candidate was approved for each vacancy incident	■ Green	Operational data; no health inference; used for matching algorithm improvement
C-4	Coordinator SPP edit history	Which SPP fields were updated, by whom, and when	■ Yellow	Reveals coordinator judgment patterns; combined with client data could surface coordination quality inferences. Append-only audit trail required.

2B — Staff (Carer) Data

2B — Staff (Carer) Data

#	Data Type	Description	Zone	Rationale
S-1	Carer identity + qualifications	Name, credential type, expiry dates	■ Green	Standard employment data; collected with employment consent

#	Data Type	Description	Zone	Rationale
S-2	Carer availability status	Daily availability window (suburb/postcode input by carer)	■ Green	Self-reported, voluntary; not location tracking. Carer initiates update. Clearly distinct from GPS surveillance.
S-3	Carer proximity score	Distance from availability postcode to client address (Google Maps computation)	■ Green	Derived from self-reported postcode; not a live GPS coordinate. No persistent location record.
S-4	Carer assignment history	Which clients each carer has visited, frequency, recency	■ Yellow	Combined with SPP data, reveals which carers are preferred/excluded by specific clients. Creates indirect employment condition implications (see E-1). Requires legal review.
S-5	Carer acceptance/rejection rate	How often each carer's assignment was approved vs. overridden by coordinator	■ Yellow	Performance-adjacent metric. Could be used to discriminate against carers in future assignment decisions. Collect only for matching improvement; do not expose as a carer-facing metric without employment law review.
S-6	Pre-visit briefing receipt	Whether carer opened the pre-visit briefing notification	■ Green	Binary delivery confirmation; no health data; operational

2C — Client Data (Soft Preference Profile — SPP)

2C — Client Data (Soft Preference Profile — SPP)

This is the most ethically complex data category. Each SPP field is classified individually.

#	Data Type	Description	Zone	Rationale
P-1	Client identity	First name, client ID (UUID), agency	■ Green	Operational; pseudonymised (UUID used in system; name only in coordinator interface)
P-2	Carer gender preference	"Prefers female carers"	■ Yellow	Sensitive under APP 3 (relates to personal circumstances); explicit opt-in required. Also creates E-1 risk (discriminatory carer filtering) — requires legal opinion before implementation.
P-3	Familiarity threshold	"Known carers only / briefed-acceptable / any"	■ Yellow	Reveals anxiety levels, cognitive state, or social isolation. Implicit health inference. Explicit opt-in required.
P-4	Dementia briefing requirements	"Client has dementia — brief new carers on [protocols]"	■ Red	Direct health condition disclosure. Constitutes sensitive health information under APP 3. DPIA mandatory. Explicit informed consent from client (or guardian) required before collection. Cannot be inferred by the system — must be coordinator-entered with client consent.
P-5	Personal triggers	"Do not move Arthur's belongings"	■ Yellow	Reveals behavioural sensitivity or anxiety. Could imply cognitive or psychological condition. Explicit opt-in required; no inference permitted.

#	Data Type	Description	Zone	Rationale
P-6	Refusal conditions	"Lin Chen refuses entry if she doesn't recognise visitor"	■ Red	Directly implies cognitive or psychological condition (distrust of strangers = potential dementia or anxiety disorder signal). Inference risk is HIGH. DPIA mandatory. Legal review required before collection.
P-7	Continuity history	Which carers have visited, how many times, last visit date	■ Green	Operational visit record; no health inference; identical to any agency visit log
P-8	Carer familiarity flag	"David Kim — 2 prior visits — positive outcome"	■ Yellow	Outcome rating ("positive") implies coordinator judgment of visit quality, which could encode health inference. Collect as binary (visited / not visited) in v1; exclude outcome rating until ethical review complete.
P-9	Free-text briefing notes	Open field: "Call coordinator if [condition]"	■ Red	Unstructured text is the highest-risk field. Free text can contain health conditions, medication names, behavioural descriptions, cognitive assessments. Must be subject to PHI/sensitive information scan before storage. Cannot be included in any notification payload. DPIA mandatory.
P-10	SPP completeness score	Percentage of fields populated	■ Green	Aggregate metadata; no individual field content; operational
P-11	Client address	Full address for matching proximity computation	■ Yellow	Location data; sensitive under APP. Stored encrypted; used only for proximity computation; not transmitted in notifications; not accessible to carers (only carer is notified of client's suburb, not full address, until assignment confirmed).

2D — Family / Family Contact Data

2D — Family / Family Contact Data

#	Data Type	Description	Zone	Rationale
F-1	Family contact identity	Name, relationship to client, contact details	■ Green	Standard contact data; collected with client's consent at intake
F-2	Notification channel preference	SMS / email / app	■ Green	Operational; non-sensitive
F-3	Notification delivery status	Delivered / failed	■ Green	Operational audit trail
F-4	Family contact international routing	Country code for SMS routing	■ Green	Technical routing data; non-sensitive

2E — AI / System-Generated Data

2E — AI / System-Generated Data

#	Data Type	Description	Zone	Rationale
A-1	Match score	Rule-based SPP compatibility score for each candidate	■ Green	Derived operational metric; not health data; used only in coordinator decision flow
A-2	SPP match explanation	Which preference tags drove the match score	■ Yellow	Combined with client and carer data, reveals which client attributes drove the decision. Coordinator-facing only; never surfaced in carer briefing or family notification.
A-3	Compliance alert data	Overdue care plan reviews, expired credentials, documentation gaps	■ Yellow	Reveals care quality information. Coordinator-only; not surfaced to family or client without clinical review.
A-4	Continuity score	Rolling 30-day carer consistency metric per client	■ Yellow	Derived from visit history; implies care quality judgment. Coordinator-only; explicit consent not required (operational metric) but must not be shared with family or client as a score.
A-5	AI confidence score	Float 0.0–1.0 for any AI-generated recommendation	■ Green	Internal system metadata; not shared externally; required in HIPAA-grade audit log
A-6	Audit log entry	Full HIPAAAuditLogEntry per CLAUDE.md Article IX	■ Yellow	Contains state transitions and action data. Not PHI but sensitive operational record. Append-only; 7-year retention; immutable. Access restricted to agency management and regulatory audit.

3. Creepiness vs. Care Test

3. Creepiness vs. Care Test

For each Yellow and Red data type: would collecting this feel like care or surveillance to the person it's about? This test is applied from the perspective of the client (SR cohort) and the carer.

Test standard (from Arthur Kovacs, SR-002): "He didn't find out about the AI flag from me. He found out because his son phoned him in a panic." This is the canonical failure case. Any data collection or notification flow that could produce this outcome fails the Creepiness vs. Care test.

Yellow Data — Creepiness vs. Care Assessment

Yellow Data — Creepiness vs. Care Assessment

Data Type	Feels Like Care If...	Feels Like Surveillance / Creepiness If...	Verdict
P-2 — Gender preference	Client was asked directly and confirmed their preference; carer assignment respects it	Coordinator assumes preference based on client's cultural background or dementia presentation; client never consented	Care — only if directly elicited from client with consent. Inferred preferences are surveillance.
P-3 — Familiarity threshold	Coordinator uses it to protect client from distressing new-carer encounters	Client discovers that a system is tracking their "anxiety level" and adjusting who visits them	Care — if framed as "protecting your routine." Creepy if framed as "monitoring your anxiety."

Data Type	Feels Like Care If...	Feels Like Surveillance / Creepiness If...	Verdict
P-5 — Personal triggers	Client told coordinator "please don't move my things" and that preference is honoured	System infers triggers from visit notes without client knowing they are being collected	Care — if directly elicited. Creepy if inferred.
P-8 — Familiarity flag (outcome)	Coordinator records "positive visit" to help the next coordinator know who Mrs. Kim trusts	Carer receives a "performance rating" based on client outcomes they weren't told about	Care for client; potentially Creepy for carer if outcome rating is accessible to them. Collect as binary (visited/not visited) in v1.
P-11 — Client address	Used only to compute proximity for replacement matching; not shared until carer is confirmed	Full address transmitted in WhatsApp matching message before assignment is confirmed	Care — only if address is withheld until confirmed assignment. Sharing address pre-confirmation is a privacy breach.
S-4 — Carer assignment history	Helps match familiar carers to clients who value continuity	Carer discovers they are being tracked across all clients and rated on "acceptance rate"	Care for client. Creepy for carer if misused. Requires carer-facing privacy notice.
A-3 — Compliance alert	Coordinator uses it to proactively fix overdue care plans before audit	Agency owner uses it to performance-manage coordinators without disclosure	Care for client. Governance policy required: compliance alerts are operational, not HR data.

Red Data — Mandatory Review

Red Data — Mandatory Review

Data Type	Risk	Required Before Collection
P-4 — Dementia briefing requirements	Direct health condition disclosure. Third-party disclosure to carers without specific consent is a Privacy Act breach. Disclosure to family without clinical gating violates Arthur Kovacs constraint (E-3).	DPIA. Explicit informed consent from client or legally appointed guardian. Legal review of disclosure obligations to carers.
P-6 — Refusal conditions	High inference risk: "refuses entry if she doesn't recognise visitor" directly implies cognitive condition (dementia, anxiety disorder). Even if true, inferring and recording it without clinical confirmation is a health inference under APP.	DPIA. Clinical confirmation before recording. Explicit consent. Legal review.
P-9 — Free-text briefing notes	Unstructured text is uncontrollable. A coordinator typing "remind her about her dementia" creates a PHI record without the associated consent and handling protections.	DPIA. PHI scan on all free-text input before storage. Clinical review of any health-related text. Consider replacing with structured fields only in v1 — defer free-text to v2 with full DPIA.

4. Compound Combination Flags

4. Compound Combination Flags

Per CLAUDE.md Article VII: "flag compound combinations." A data type that is Green or Yellow individually may become Red when combined with another. These combinations must be identified before the data model is designed.

Combination	Component 1	Component 2	Individual Zones	Combined Zone	Risk
CC-1	Refusal conditions (P-6)	Dementia briefing requirements (P-4)	■ Red	■ Red (amplified)	Two health indicators combined produce a clinical profile without a clinical governance framework. This is an unregistered health record. Cannot exist without DPIA + clinical oversight.
CC-2	Familiarity threshold (P-3)	Refusal conditions (P-6)	■ Yellow	■ Red	Familiarity anxiety + refusal behaviour = cognitive impairment inference. The combination produces a health conclusion neither field implies individually.
CC-3	Continuity score (A-4)	Client address (P-11)	■ Yellow	■ Red	Continuity score reveals care quality patterns; combined with address creates a geographically indexed care quality signal. If accessible externally (e.g., family portal), this is a health inference about a specific person at a specific location.
CC-4	Carer assignment history (S-4)	Gender preference (P-2)	■ Yellow	■ Red	Combined: reveals which carers are systematically excluded from a client's care on the basis of gender. At scale, this creates a discriminatory assignment pattern for carers — the E-1 risk made concrete in the data model. This combination is the mechanism of discrimination, not just a theoretical risk.
CC-5	Free-text notes (P-9)	Any other SPP field	■ Red	■ Red (absolute)	Free-text combined with any structured field creates an uncontrolled health record. The structured fields provide context that makes the free-text clinically interpretable. Do not combine free-text with structured SPP fields in the same query or prompt.
CC-6	SPP match explanation (A-2)	Carer notification (DES-5)	■ Green	■ Yellow (elevated)	The match explanation (which preference tags drove the score) must never appear in the carer briefing notification. Showing "matched because: female carer required" reveals the client's gender preference to the carer — a disclosure the client may not have consented to. Carer receives only: visit details + soft briefing notes (non-inferential).
CC-7	Compliance alert data (A-3)	Client identity (P-1)	■ Green	■ Yellow	Compliance alerts are coordinator-facing operational data. Combined with client identity, they become a per-client quality signal. Must not be surfaced in any family-facing or client-facing interface without clinical review.
CC-8	WhatsApp message content	Any Yellow/Red field	Variable + Variable	Context-dependent	WhatsApp messages transit Meta's infrastructure. No Yellow or Red data type may appear in any WhatsApp message payload. Green data only: staff names, match score (numeric), visit time, suburb (not full address). See VI-4 resolution path in Artifact 8.

5. Notification Routing Rules (E-3 Enforcement)

5. Notification Routing Rules (E-3 Enforcement)

Arthur Kovacs constraint — mandatory structural gate derived from E-3 (Artifact 8, Q4 — structural gate).

Rule: Patient/Client is always first to know. Family is never notified before the coordinator has approved and the client has been informed (or the client has a recorded preference for family-first notification).

Event	Notification Order	Condition
Visit cancelled or replaced	1. Coordinator (approval confirmation) → 2. Replacement carer (assignment) → 3. Client (if app / SMS enrolled) → 4. Family	Family notification triggers only after coordinator_approved = true AND client_notified = true (or client_notification_preference = family_first with explicit consent)
Schedule change (non-urgent)	1. Coordinator → 2. Client → 3. Family	Same ordering. Family is never notified of a schedule change before the client.
Compliance alert	Coordinator only	Never surfaced to family or client without coordinator/clinical review.
AI inference (any health signal)	Coordinator / Clinical reviewer → Client (with clinical framing) → Family (if client consents)	No AI inference is communicated to family before it is reviewed by a clinician and disclosed to the client. This is the Arthur Kovacs constraint operationalised.

Prohibited notification flows

- AI flag → Family (bypasses client and clinical review)
- Schedule change → Family (before client is informed)
- SPP data → Carer briefing (fields above Green zone level)
- Compliance alert → Client or Family (coordinator-only operational data)

6. Data Collection Rules by Zone

6. Data Collection Rules by Zone

■ Green — Collect by Default

■ Green — Collect by Default

Standard privacy notice sufficient. No additional consent required. Collect during normal product onboarding.

Data types: C-1, C-2, C-3, S-1, S-2, S-3, S-6, P-1, P-7, P-10, F-1, F-2, F-3, F-4, A-1, A-5

Privacy notice must include

- What data is collected
- How it is used (operational scheduling and matching)
- Who has access (coordinator, agency owner, regulatory audit)
- Retention period (7 years per HIPAA-grade design floor; review against APP 11)
- How to request correction or deletion (APP 12, APP 13)

■ Yellow — Explicit Opt-In Required

■ Yellow — Explicit Opt-In Required

Collect only after explicit opt-in. DPIA recommended. Separate consent collection event.

Data types: C-4, S-4, S-5, P-2, P-3, P-5, P-8 (binary only — no outcome rating), P-11, A-2, A-3, A-4, A-6

Consent event design

- Coordinator presents opt-in to client during intake or first scheduled review
- Language: "We'd like to record your carer preferences to ensure consistency in your care. This information is only seen by your care coordinator and is used to match you with familiar carers when your regular carer is unavailable. You can update or remove this information at any time."
- Recorded consent: timestamp + coordinator_id + client_id + fields consented to
- Granular opt-in: client can consent to P-2 (gender preference) without consenting to P-3 (familiarity threshold)

DPIA trigger: Any Yellow data type collected at scale (>50 clients) requires a Privacy Impact Assessment before collection begins.

■ Red — Emergency-Only or Requires Full Legal Process

■ Red — Emergency-Only or Requires Full Legal Process

Cannot be collected or implemented without: DPIA completed + explicit informed consent + legal review + clinical oversight.

Data types: P-4, P-6, P-9 (and all Compound Combinations CC-1 through CC-5)

Mandatory steps before any Red data type enters the product

- **DPIA** — Document the data flow, necessity, proportionality, risks, and mitigations. Must be signed off by a designated privacy officer or equivalent.
- **Legal review** — Australian privacy counsel must confirm the data type and collection method is lawful under APP 3 (sensitive information) and does not breach anti-discrimination law (for P-2 + P-6 compound).
- **Clinical oversight** — Any data type that implies a health condition (P-4 dementia, P-6 refusal behaviour) must be confirmed by a clinician before being recorded, not inferred by the coordinator or the AI.
- **Explicit informed consent** — Client (or legally appointed guardian) must consent specifically to this data type, separate from the general Yellow consent event. Consent must be documented, revocable, and reviewable.
- **Minimum necessary** — Only collect the specific field required for the feature. No Red data type should be collected speculatively or for future use.

V1 recommendation for Red data types

- **P-4 (Dementia briefing):** Replace with a structured field: "Requires new-carer briefing: Yes / No" — binary flag without condition disclosure. The briefing protocol lives in the coordinator's head; only the flag is in the system. Eliminates the Red zone risk in v1.
- **P-6 (Refusal conditions):** Replace with: "Entry requires: [dropdown — ID check / introduction by coordinator / familiar carer only]" — removes condition inference. The reason for the requirement is not recorded.
- **P-9 (Free-text notes):** Defer entirely to v2. In v1, all SPP fields are structured dropdowns or binary flags. Free-text introduces uncontrollable PHI risk that cannot be managed without a full DPIA and PHI scanning infrastructure.

7. Ethics Gate — Feature Clearance Status

7. Ethics Gate — Feature Clearance Status

Every feature from Artifact 6 (Top 5) is assessed against this ethics map before it can proceed to Artifact 10 (Agentic Safety) or the Strategy Plugin.

Feature	Key Data Types Used	Ethics Gate Status	Condition to Clear
PM-1 Smart Match Engine	S-2 (availability), S-3 (proximity), P-2 (gender pref), P-3 (familiarity), P-7 (history), A-1 (match score)	■■ CONDITIONAL	Legal opinion on E-1 (discriminatory selection) required before P-2 is used as a matching parameter. If legal opinion is negative, P-2 is removed from match scoring; coordinator sees it as advisory only.
PM-2 SPP: Institutional Memory	P-1 through P-9, C-4	■■ CONDITIONAL	P-4, P-6, P-9 must be replaced with structured alternatives (Section 6 recommendation) before v1 collection begins. Yellow fields require opt-in consent event. DPIA required for collection at scale.
DES-1 3-Tap Approval Flow	A-1 (match score), S-1 (carer name), S-2 (proximity)	■ CLEARED	All data types used are Green. No ethics gate blocking.
ENG-2 WhatsApp Integration	S-1 (carer name), A-1 (match score), P-11 (client address — suburb only)	■■ CONDITIONAL	CC-8 compound rule: only Green data in WhatsApp payload. P-11 restricted to suburb (not full address) until confirmed assignment. APP 8 privacy counsel review required (VI-4).
DES-5 Carer Briefing Notification	P-1 (first name), P-5 (triggers), P-2 (gender preference)	■■ CONDITIONAL	CC-6 compound rule: match explanation (A-2) must not appear in carer notification. P-2 (gender preference) must not appear in carer notification — it is a client preference, not a carer instruction. P-5 (triggers) may appear as operational guidance: "Please introduce yourself clearly at the door" — not "Client prefers X because of Y condition."

8. DPIA Trigger Register

8. DPIA Trigger Register

All DPIA obligations identified in this artifact.

DPIA ID	Trigger	Data Types	Priority	Owner
DPIA-01	SPP collection at scale (>50 clients) — Yellow fields	P-2, P-3, P-5, P-8, P-11, S-4	High — before agency onboarding begins	PM Lead + Privacy Counsel
DPIA-02	Dementia briefing requirements (P-4)	P-4	CRITICAL — before any collection	Privacy Counsel + Clinical Advisor
DPIA-03	Refusal conditions (P-6)	P-6	CRITICAL — before any collection	Privacy Counsel + Legal Counsel
DPIA-04	Free-text notes (P-9)	P-9	CRITICAL — recommend deferral to v2	Privacy Counsel
DPIA-05	Compound combination CC-1 (P-4 + P-6)	P-4 + P-6	CRITICAL — do not combine in v1 data model	PM Lead + Privacy Counsel
DPIA-06	Compound combination CC-4 (S-4 + P-2)	S-4 + P-2	High — before matching algorithm is built	Legal Counsel (anti-discrimination)
DPIA-07	WhatsApp cross-border disclosure (CC-8)	All message payload fields	High — before ENG-2 production	Privacy Counsel (APP 8)

9. V1 Data Model — Cleared Fields Only

9. V1 Data Model — Cleared Fields Only

The minimal data model that can enter production in v1 without any outstanding DPIA or legal review (all Red fields replaced with structured alternatives, Yellow fields with completed consent protocol).

SPP fields cleared for v1 collection (with Yellow consent event)

Field	Zone	V1 Implementation
Gender preference	■ Yellow	Dropdown: Female only / Male only / No preference
New carer briefing required	■ Green	Boolean: Yes / No — no condition disclosed
Familiarity threshold	■ Yellow	Dropdown: Known carers only / Briefed-acceptable / Any
Entry protocol	■ Green	Dropdown: ID check required / Introduction call required / No special requirement
Personal sensitivities	■ Yellow	Short structured text (max 100 chars): "Do not move belongings in lounge" — no condition inference
Carer familiarity history	■ Yellow	Carer UUID list + visit count + last visit date — no outcome rating
Client address (matching only)	■ Yellow	Full address stored encrypted, suburb only used for proximity scoring, full address only released to confirmed replacement carer

Fields deferred to v2 (pending DPIA + legal review)

- Dementia briefing content (P-4 detail beyond boolean)
- Refusal conditions with reason (P-6 detail beyond entry protocol dropdown)
- Free-text notes (P-9)
- Outcome ratings in familiarity history (P-8 enhancement)

10. Handshake Table

10. Handshake Table

ID	From Artifact	To Next Skill	What Transfers
HS-DISC-ET H-01	Artifact 9 — Red data types + DPIA register	agentic-safety-discovery (Skill 10)	P-4, P-6, P-9 compound risks → Level 1/2/3 agentic action classification for any feature touching these fields
HS-DISC-ET H-02	Artifact 9 — Notification routing rules (Section 5)	agentic-safety-discovery (Skill 10)	E-3 structural gate → HITL requirement before any family notification action
HS-DISC-ET H-03	Artifact 9 — Feature clearance table (Section 7)	brainstorm-experiments-new (Skill 11)	Conditional clearances for PM-1, PM-2, ENG-2, DES-5 → experiments must test within cleared data boundaries
HS-DISC-ET H-04	Artifact 9 — V1 data model (Section 9)	startup-canvas (Strategy Plugin)	Cleared field set → informs data collection design in canvas
HS-DISC-ET H-05	Artifact 9 — DPIA-01 through DPIA-07	compliance-privacy-audit (Strategy Plugin)	DPIA obligations → Compliance Risk Score inputs

ID	From Artifact	To Next Skill	What Transfers
HS-DISC-ETH-06	Artifact 9 — Compound combinations CC-1 through CC-8	agentic-logic-spec (Execution Plugin)	Compound combinations become explicit IF-THEN guards in pseudocode — CC-4 (S-4 + P-2) and CC-8 (WhatsApp + Yellow/Red) are structural blockers

11. Action Items

11. Action Items

Date	Owner	Action
2026-03-27	PM Lead	Run agentic-safety-discovery (Skill 10) — feed notification routing rules (Section 5) + feature clearance table (Section 7)
2026-03-27	Privacy Counsel	DPIA-01: initiate SPP Yellow-field DPIA for scale collection
2026-03-27	Privacy Counsel	DPIA-02 + DPIA-03: legal review for P-4 (dementia) and P-6 (refusal) — recommend v1 structured-field replacements
2026-03-27	Legal Counsel	E-1 / DPIA-06: anti-discrimination opinion on P-2 (gender preference) as a matching parameter
2026-03-28	PM Lead	Update SPP data model spec to v1 cleared fields only (Section 9) — remove P-4 detail, P-6 detail, P-9 from any v1 wireframe or schema
2026-03-28	Designer	Update DES-5 carer briefing notification template — confirm CC-6 rule: no match explanation, no gender preference in carer notification
2026-03-28	PM Lead	Update ENG-2 WhatsApp message spec — confirm CC-8 rule: Green data only; suburb not full address until confirmed assignment
2026-03-29	PM Lead	Present consent event design (Section 6 Yellow) to Angela during E2 session — confirm framing is acceptable to coordinator before designing the UX

Ethics gate note: This artifact is a gate, not a guideline. No feature with a Conditional clearance (Section 7) may enter the build pipeline until the stated condition is resolved. No Red data type may be collected until DPIA is completed and legal review is signed off. The compound combinations in Section 4 are structural constraints that must appear in agentic-logic-spec pseudocode as explicit IF-THEN guards — they are not design preferences.
