3. Evaluate RAG - There Are Only 6 RAG Evals by Jason Liu

RAG systems have 3 core components:

- Q A question
- C Retrieved context
- A An answer

- C Q Context Relevance:** How well do the retrieved chunks address the question's information needs?
- A C Faithfulness/Groundedness :** To what extent does the answer restrict itself only to claims that can be verified from the context?
- A Q Answer Relevance:** How directly does the answer address the specific information need expressed in the question?)

- C A Context Support Coverage:** Does the retrieved context contain all the information needed to fully support every claim in the answer?
- Q C Question Answerability:** Given the context, is it possible to formulate a satisfactory answer to the question?
- Q A Self-Containment:** Can the original question be inferred from the answer alone?
