

How to Build an AI Agent?

The 7-Step Process to Build an AI Agent

Common AI Agent Frameworks

No-code	Framework	LLM	MCP	Tools (Functions everywhere)	Agents Orchestration
✗	OpenAI Agents API	OpenAI	✓ Remote	Predefined (web, file/code)	Threads
✗	Google Vertex AI	*	✓ Remote	Predefined (search, vision, etc.)	Flow-based, native A2A
✗	Anthropic Agents API	*	✓ Remote	Predefined (web, file/code)	Tool-calling only
✗	Microsoft AutoGen	*	✓ Local, Remote	Predefined (REPL, code)	Programmatic chaining
✓	Autogen Studio	*	✓ Local, Remote	Predefined	Visual agent chaining
✗	LangGraph	*	✓ Local, Remote	LangChain Functions	Graph (DAG)-based flow
✗	LangChain	*	✓ Local, Remote	Functions (custom-defined)	Manual (chains/agents)
✗	CrewAI	*	✓ Local, Remote	Predefined, 40+ integrations	Flow- and role-based
✓	n8n	*	✓ Local, Remote	Predefined, 100+ Integrations	Workflows, sub-workfl.
✓	Make	*	⚠ Limited	Predefined, 100+ Integrations	Scenarios, sub-scenarios
