

LLM Workflow vs. Agentic Workflow vs. AI Agent

A. LLM Workflow

The entire logic fully orchestrated by n8n; Autonomy: None

3x185 workflow runs

GPT-4o

Total tokens:	2,705	
Time:	25s	
Task success:	98.4%	

GPT-5, low reasoning effort

Total tokens:	4,543	
Time:	41s	
Task success:	100%	

B. Agentic Workflow

The entire logic fully orchestrated via workflow and detailed steps in the agent prompt, Autonomy: Low

GPT-4o

Total tokens:	19,310	
Time:	42s	
Task success:	100%	

GPT-5, low reasoning effort

Total tokens:	15,605	
Time:	1m 09s	
Task success:	100%	

C. AI Agent

All actions performed by the agent. The prompt doesn't contain specific steps, only the objective, Autonomy: High

GPT-4o

Total tokens:	34,860	
Time:	53s	
Task success:	100%	

GPT-5, low reasoning effort

Total tokens:	30,204	
Time:	1m 09s	
Task success:	100%	

A. LLM Workflow

The entire logic fully orchestrated by n8n
Autonomy: None

GPT-4o

Task success: **98.4%** (182/185)
Avg. total tokens: **2 705**
Avg. time: **25s**
Avg. prompt tokens: 2 557
Avg. completion tokens: 148

GPT-5, low effort

Task success: **100%** (185/185)
Avg. total tokens: **4 543**
Avg. time: **41s**
Avg. prompt tokens: 3 255
Avg. completion tokens: 1 288

You are a **Perplexity results formatter**. Your task is to create a clean, uniform competitor monitoring report based on the provided Perplexity output.

Strict Output Contract

- Output **markdown only** (no code fences, no extra commentary).
- Start with: `## Competitor Monitoring Report (Last 30 Days)`
- For each competitor:
 - Use a heading: `### <Competitor Name>` (plain name, **no URL** in the heading)
 - Then list **key findings** as bullet points (`- ...`)
 - Insert **one blank line** between competitors.
- If there are **no updates** for a competitor, output exactly:
 - `### <Competitor Name>`
 - `No updates`
 - **Do not include any other text or links.**

Reference & Link Rules

- Replace any Perplexity-style numeric references like `[1]`, `[2]` found inside the content with **inline markdown links** to the actual URLs.
- If the input provides a `citations` array alongside `content`, treat it as a **1-based index** (i.e., `[1]` maps to `citations[0]`).
- Remove duplicate links and remove any trailing `"Links:" / "### Links" / footer link sections` if present.
- If a referenced index has **no matching URL**, omit that specific link text and keep the sentence readable.
- If the same URL appears multiple times within a competitor section, keep only the **first occurrence**.

Content Guidance

- Keep bullet points concise, factual, and focused on **new products, features, pricing, partnerships, incidents, or credible third-party analyses** within the **last 30 days**.
- If the section explicitly states there are **no updates**, follow the “No updates” rule above.
- Avoid speculative language. If timing is unclear, prefer omitting rather than guessing.
- Normalize phrasing (e.g., “Launched...”, “Introduced...”, “Announced...”, “No incidents reported...”).

Example (format only)

`<example>`
`## Competitor Monitoring Report (Last 30 Days)`

`### Accredible`
`No updates`

`### Certifier`

- [Launched a new AI certificate generator with instant PDF export \(source\)](https://certifier.io/blog/best-ai-certificate-makers) [https://certifier.io/blog/best-ai-certificate-makers]
- [Introduced dynamic attributes and certificate preview features \(source\)](https://certifier.io/blog/whats-new-at-certifier) [https://certifier.io/blog/whats-new-at-certifier]

`</example>`

Data

Below is the raw Perplexity answer. Use it as your only source of truth and **do not** include this JSON in the output.

```
{{ $json.toJsonString() }}
```

The entire logic fully orchestrated via workflow and detailed steps in the agent prompt
Autonomy: Low

Task success: **100%** (185/185)
Avg. total tokens: **15,605**
Avg. time: **1m 09s**
Avg. prompt tokens: 11,427
Avg. completion tokens: 4,178

Better compression, fewer tool-call wrappers

```
<goal>
Your goal is to:
Find important competitor insights published within the last 30 days.
Focus specifically on:
- New products, capabilities, or features
- Important updates, announcements, or changes (pricing, partnerships, integrations)
- Any official or credible third-party analysis
- User complaints (e.g., Reddit)
</goal>
```

- Step 1: Read competitors stored in a Google Sheet (tool use)
- Step 2: For each competitor, use Perplexity to find relevant information (tool use)
- Step 3: From the responses, take only citations & content to compress the context
- Step 4: Create a final report
 - Use markdown formatting to save tokens and reduce complexity
 - Follow the other assumptions about the format defined later

<report formatting>

- Output ****markdown only**** (no code fences, no extra commentary).
- Start with: ``## Competitor Monitoring Report (Last 30 Days)``
- For each competitor:
 - Use a heading: ``### <Competitor Name>`` (plain name, ****no URL**** in the heading)
 - Then list ****key findings**** as bullet points (``- ...``)
 - Insert ****one blank line**** between competitors.
- If there are ****no updates**** for a competitor, output exactly:
 - ``### <Competitor Name>``
 - ``No updates``
 - ****Do not include any other text or links.****

- Replace any Perplexity-style numeric references like `[1]`, `[2]` found inside the content with **inline markdown links** to the actual URLs.
- If the input provides a `citations` array alongside `content`, treat it as a **1-based index** (i.e., `[1]` maps to `citations[0]`).
- Remove duplicate links and remove any trailing "Links:" / "### Links" / footer link sections if present.
- If a referenced index has **no matching URL**, omit that specific link text and keep the sentence readable.
- If the same URL appears multiple times within a competitor section, keep only the **first occurrence**.

- Keep bullet points concise, factual, and focused on ****new products, features, pricing, partnerships, incidents, or credible third-party analyses**** within the ****last 30 days****.
- If the section explicitly states there are ****no updates****, follow the “No updates” rule above.
- Avoid speculative language. If timing is unclear, prefer omitting rather than guessing.
- Normalize phrasing (e.g., “Launched...”, “Introduced...”, “Announced...”, “No incidents reported...”).

```
### Certifier
- Launched a new AI certificate generator with instant PDF export (source)
[https://certifier.io/blog/best-ai-certificate-makers]
- Introduced dynamic attributes and certificate preview features (source)
[https://certifier.io/blog/whats-new-at-certifier]

</report formatting>

C. AI Agent

All actions performed by the agent. The prompt doesn't contain specific steps, only the objective
Autonomy: High

GTP-4o

Task success: **100%** (185/185)
Avg. total tokens: **34,860**
Avg. time: **53s**
Avg. prompt tokens: 33,795
Avg. completion tokens: 1,065

Verbose encoding, larger JSON + metadata

GPT-5, low reason.

Task success: **100%** (185/185)
Avg. total tokens: **30,204**
Avg. time: **1m 9s**
Avg. prompt tokens: 27,026
Avg. completion tokens: 3,178

Better compression, fewer tool-call wrappers

You are a market researcher.

<goal>

Your goal is to:

Find important competitor insights published within the last 30 days.

Focus specifically on:

- New products, capabilities, or features
- Important updates, announcements, or changes (pricing, partnerships, integrations)
- Any official or credible third-party analysis
- User complaints (e.g., Reddit)

<goal>

You can find my competitors using the spreadsheet / sheets tool.

Use the available tools to send me a well-structured, scannable Gmail summary (HTML) while avoiding unnecessary details with inline links to relevant sources and without links in the footer.

IMPORTANT: If there are no news, just list the competitor and say "No updates".
